

Nutrition Education

Quality nutrition education should be presented creatively and be grade appropriate build knowledge and skills throughout the child's school experience. It addresses factual information and explores the health, social, cultural, and personal issues influencing food choices. Nutrition and nutrition education are recognized as important contributors to overall health.

Comprehensive nutrition education programs extend beyond the classroom into the larger school environment. The school cafeteria serves as a laboratory where students apply critical thinking skills taught in the classroom. Physical education programs, after-school sports, and school health services are appropriate avenues for nutrition education efforts. Students need to explore how:

1. Knowledge has purpose and meaning in their lives; and
2. Curriculum points to the connections within and across disciplines.

Examples of how nutrition can be integrated into classes include discussing ethnic food practices in the context of history and geography; preparation of healthy food in home economics, adult living or life skills courses; the study of essential nutrients in science and biology classes; applying mathematical and technological skills to conduct dietary analysis; and addressing the wide range of social, cultural, and psychological aspects of food in language and social studies classrooms.

The District has a comprehensive curriculum approach to nutrition in kindergarten through grade 12. All instructional staff are encouraged to integrate nutritional themes into daily lessons when appropriate. Elementary, Jr. High and High School health classes cover this topic each year. The health benefits of good nutrition should be emphasized. These nutritional themes include but are not limited to:

1. Knowledge of My Plate;
2. Healthy choices to decrease illness;
3. Sources and variety of foods;
4. Guide to a healthy diet;
5. Diet and disease;
6. Understanding calories and food as energy;
7. Healthy snacks;
8. Healthy breakfast;
9. Healthy diet;
10. Food labels;
11. Major nutrients;
12. Multicultural influences;
13. Serving sizes by age, sex and activity level;

14. Proper sanitation;
15. Importance of fluid intake and selection; and
16. Identifying and limiting low nutrition food.

The District nutrition policy reinforces nutrition education to help students practice these themes in a supportive school environment.

All nutrition education will be scientifically based, consistent with the most recent Dietary Guidelines for Americans.

Nutrition education will be offered in the school cafeteria as well as in the classroom, with coordination between school food service staff and teachers. Teachers can display posters, videos, websites, etc. on nutrition topics and send materials home to involve parents.

Participation in USDA nutrition programs is encouraged as the District conducts nutrition education activities and promotions that involve students, parents, and the community. The school nutrition team responsible for these activities will be composed of child nutrition services staff, student services staff, school nurses, health teachers, and physical education coaches.

School Community

For a truly comprehensive approach to the school-based nutrition programs and services, it is crucial that all members of the school community help to create an environment that supports healthy eating practices.

Parent Involvement

Parents are to be advised that their children are participating in a nutrition education or counseling experience, encouraging their support at home. Parent involvement can be in person or through communication sent to the home.

1. Nutrition education will be provided to parents beginning at the elementary level. The goal will be to continue to educate parents throughout the middle and high school levels;
2. Healthy eating and physical activity will be actively promoted to students, parents, teachers, administrators, and the community at registration, PTO meetings, open houses, health fairs, teacher in-services, etc.; and
3. Nutrition education may be provided in the form of handouts, postings on the District website, or presentations at open houses that focus on nutritional value and healthy lifestyles.
